

-
- Objective** To utilize twelve years of experience in web development and implementation, and more than five years experience in team management within a Government environment, to benefit a Federal Agency's web and IT goals.
- Skills**
- Programming Languages and Concepts:**
- .NET and ASP.NET using C#, Object Oriented Programming, SOAP, XML, XSL, ASP, SQL, T-SQL, Database Design, JavaScript, ColdFusion, DHTML, CSS, XHTML/HTML
- Operating Systems:**
- Extensive experience on and knowledge of Windows 2000/2003 Server/XP/Vista platforms
- Frameworks, Development Tools, and Servers:**
- Microsoft .NET Framework 1.1/2.0/3.5, MS Visual Studio 2008, SQL Server 2000/2005, IIS 5.0/6.0, Visual Source Safe, Google Search Appliance, ColdFusion Server 5.0/MX
- Miscellaneous:**
- Five and a half years experience working onsite in a Federal Government environment managing public facing and highly visible web content
 - Experience with web security, vulnerability assessment, and issue mitigation
 - Full project lifecycle planning and support
 - Expert in Section 508 compliant web application development
 - Proficient with major system and platform Certification & Accreditation process
 - Extensive experience in project management and team management
- Work Experience** **RMCI, Office of Personnel Management Web Contract, Washington, DC** (July 2003 – Present)
Director of Application Development (Promoted July 2005 – Present)
- Direct manager of seven fulltime development staff, three senior level and four junior level
 - Interacted directly with all levels of management within OPM to suggest appropriate technologies and software approaches, perform proof of concept implementations, and provide expert advice
 - Oversaw the implementation of Web 2.0 initiatives within OPM including an agency-wide wiki solution and the development of an internal IT operating status blog
 - Led the effort to migrate OPM web application development to utilize ASP.NET
 - Coordinated the development of the Federal Investigative Services Division (FISD) Intranet applications, supporting the FISD field offices and remote investigators throughout the country
 - Worked with Federal Management to develop the annual Web Team budget and resource estimates for FY06 – FY09
 - Responsible for creating and verifying estimates on new and maintenance application work
 - Directly involved in all aspects of web software development that require heightened security, high availability, protection of Personally Identifiable Information (PII) data collection, or are deemed “high visibility”
 - Implemented policy and procedures to include data manipulation audit trails to provide a high level of accountability and security for all administrator managed content applications
 - Responsible for documentation related to the OPM General Support System C&A process for the *www.opm.gov* remote web hosting environment
 - Oversaw the development of all aspects of *www.telework.gov*, an OPM/GSA interagency project, including the interactive FAQs, News Releases, and their respective administrative interfaces
 - Responsible for verification of 508 compliance and OPM accessibility standards for all application development produced by the Web Team
 - Acted as a mentor to new hires and junior level team members
 - Worked directly with customers on requirements gathering and technical specifications definition
 - Developed, implemented, and oversaw the use of an XML configuration scheme to manage the look and feel associated with each OPM sub-site under *www.opm.gov*
 - Implemented a “Page Inventory” system to catalog, define ownership, and automatically expire outdated material within *www.opm.gov*'s 60,000 pieces of static web content
 - Responsible for daily monitoring and administration of all OPM Web Team managed environments

Senior Developer/System Administrator (July 2003 – July 2005)

- Implemented a comprehensive failover/disaster recovery environment, performed failover exercises, and compiled related annual report documentation
- Coordinated the installation and managed the configuration of OPM's three Google Search Appliances
- Created and implemented the Federal Government Operating Status management module
- Developed and deployed the "OPM news release" and "what's new" administration, user display, and RSS feed applications on www.opm.gov
- Managed the implementation of OPM's WebTrends analytics tools
- Coordinated the install of OPM's WebXM content quality assurance tool
- Contributed to the search for an OPM Content Management System solution
- Developed and implemented a common authentication user management system for internal and external agency website users.
- Managed Web Team SQL Server database servers in the development and production environment
- Implemented a common template include system to ease future website redesigns
- Migrated the OPM Web Team to development using the ASP.NET framework exclusively
- Handled the configuration, maintenance, and upgrades associated with OPM's load balanced hosting environment

Doceus, Inc., Washington, DC (August 2000 – July 2003)

Senior Developer (Promoted December 2002 – July 2003)

- Primary developer in charge of small teams on several large scale web applications
- Primary developer on the translation of the Printing Industries of America's GAIN.net from a Java Servlet to ColdFusion based application
- Responsible for the integration and customization of Doceus' Association Management Software
- Primary developer for clients in the maintenance phase of their project lifecycle
- Prepared detailed technical specifications and functional requirements documents
- Assisted in the migration to a .NET development environment
- Created a C# windows service and tray application to automate systems administration tasks on production servers
- Leader of client-attended seminars on web hosting, ColdFusion development, ASP.NET development, web security vulnerabilities and network security best practices

Lead Developer (August 2000 – December 2002)

- Primary developer on several medium scale association and non-profit websites
- Team member on multiple corporate and startup enterprise level web applications
